My mother always complimented the things I created in online platforms and said I should try architecture. This made me really consider having architecture as a career goal as it is both well paying and something I enjoy. I will attempt to get to this profession by taking arts electives to be eligible for the career path in college.

A few characteristics and experience that I have that can relate to this career path is that I am artistic and cooperative. With me being artistic, I can design aesthetically pleasing and original buildings. Of course, cooperation can lead to more mixed and better ideas conjoined into one and making a beautiful creation.

A few activities that I have participated in so far are engineering and design, currently computer science essentials, computer science club, astronomy club, paleontology club, martial arts, bass lessons, guitar lessons, violin lessons, swimming class, mandarin school, and 3d printing classes. These are a wide variety of skills I have learned throughout my life that will surely be of use to you. Things I have learned from these experiences is that to succeed, I can not work alone in projects and cooperating with others is the most efficient way to complete tasks quickly and with quality. It is for these reasons that I should be considered for this career path. Thank you for your time.
